

Elektrobit

We are Elektrobit

Welcome to the future of mobility.

Elektrobit is an award-winning, visionary global supplier of embedded and connected automotive software products and services for the automotive industry.

We offer you flexible, innovative solutions for car infrastructure software, connectivity & security, automated driving and related tools, and user experience.

In addition to our engineering services, we provide end-to-end automotive cyber security solutions with our partner Argus.

We understand software development in the automotive industry, having worked with the top 10 global carmakers for over 30 years.

Our contributions include software integration for Ford SYNC and a revolutionized vehicle infrastructure architecture for VW's ID.3.

We also developed user experience and infotainment components for Sony's VISION-S concept car.

Head to our website for [» more success stories](#).

Company key facts

Powers more than 100 million vehicles with over 1 billion embedded devices

Spans three continents and eleven countries with 23 offices worldwide

More than 3400 Elektrobit employees, and over 500 in our e.solutions GmbH joint venture

Most likely we have been driving together.

All vehicles with Elektrobit's software onboard lined around the world would circle the equator **11 times**.
