CRITICAL EMBEDDED SYSTEMS

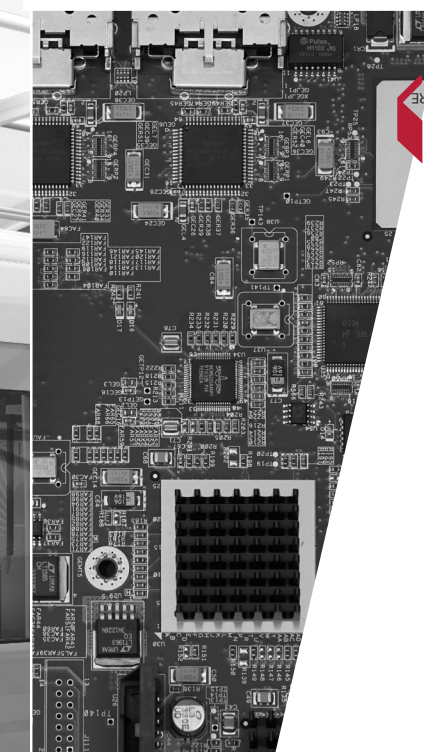

MANUFACTURER OF AUTOMATION PRODUCTS

Since 1983, Leroy Automation designs, manufactures and sells automation products and components for railway, military and industrial applications.

Especially designed for harsh environments, our products are suitable for demanding electromagnetic environments, for extreme thermal situations and high-vibration requests.

We offer a catalogue of standard products and we design solutions to meet particular needs either by adapting our commercial off-the-shelf (COTS) products, or by designing a custom-specific solution.

Leroy Automation is the right partner to accompany its customers for the industrialisation of their products and solutions.

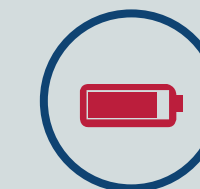

Leroy Automation manufactures highly reliable automation products suited for harsh environments. Our company is a globally recognized supplier of control products designed for the railway industry.

Each employee is part of a global network of partners linked by a spirit of long-term trust, continuously fulfilling commitments and a proactive drive to meet the excellence in our domain of expertise.

Alain WOJTASZAK, General Manager

More than **100,000 PRODUCTS**
operating around the globe

Our products have a lifetime of
more than **25 YEARS.**

INNOVATION
AT THE HEART
OF OUR STRATEGY

ENGINEERING SERVICES

Leroy Automation accompanies its customers in their international projects. From preliminary design stages, to advanced technical specifications analysis, electrical and mechanical engineering developments, product industrialization, high-volume product manufacturing and system integration, Leroy Automation is the right partner to team-up with from prototyping until serial production for an optimal level of quality excellence.

Acting as a global design, integration and manufacturing partner, Leroy Automation's experts are always available to take on new industrial challenges by exploiting their innovation skills.
